Professional Summary

Full stack software engineer with 3 years of experience building scalable, high-availability web platforms and APIs in enterprise environments. Strong React/TypeScript frontend depth combined with backend experience in Node.js and Python/FastAPI — including RESTful and GraphQL API design, microfrontend architecture, and end-to-end feature delivery. Proven track record of owning full product surfaces independently, shipping performance-critical optimisations, and driving large-scale migrations. Excited by distributed systems challenges and building resilient, user-facing products at scale.

Skills

Frontend:	React, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, Redux, GraphQL (client), Microfrontend Architecture, Vite, Webpack
Backend:	Python, FastAPI, Node.js, REST API Design, GraphQL, SSE (Server Sent Events), Microservices
Testing & CI/CD:	GitLab CI/CD, test case analysis, code review
AI/GenAI:	LangChain, LangGraph, Azure OpenAI, Ollama, RAG pipelines, Multi-agent orchestration
Databases:	SQL fundamentals, NoSQL concepts, ChromaDB (vector store), LanceDB.
Tools:	Git, GitLab, Docker, Figma, GitHub Copilot, Jupyter, Swagger

Work Experience

Software Engineer 2 | Aug 2023 – Present

UBS Business Solutions (India) Pvt. Ltd

- Full stack ownership of an internal AI document analysis platform: designed and built the React/TypeScript frontend (file upload, chat interface, structured evaluation views) and Python/FastAPI backend with REST and SSE endpoints, serving multiple internal teams.
- Architected and integrated a **multi-agent RAG pipeline** (LangChain, Agno) with agentic, graph, and traditional retrieval strategies — enabling a 'Chat with System Architecture Document' experience that reduced manual review time for engineers.
- Collaborated with a team of 4 to design and deliver **RESTful APIs using Node.js/Express**, defining contracts with Swagger/OpenAPI and aligning on data models upfront — reducing integration rework and shipping the feature on schedule.
- Drove **microfrontend architecture** across multiple UI projects: implemented JSON-driven dynamic form rendering with role-based component customisation, cutting time-to-build for each new multi-form project by **30–35%**.
- Led end-to-end migration of a legacy **ExtJS application to React**: proposed architecture, secured business approval, and delivered the full solution independently — including a shared Redux-managed component library with documentation.
- Improved frontend performance through **code splitting, lazy loading, and Vite migration** from Create React App — reducing load times by **30–40%** and build package sizes by **50%+**.
- Diagnosed and resolved production incidents across 50+ forms; identified untested edge cases that QA missed, pinpointed root causes, and applied fixes — contributing directly to site reliability.
- Conducted code reviews and mentored team members on frontend best practices; built UX component patterns that were adopted as standards across all UI teams.

Software Engineer Intern | Jan 2023 – May 2023

UBS Business Solutions (India) Pvt. Ltd

- Built a **drag-and-drop form builder POC** in React with reusable components, dynamic form creation, and real-time layout updates — demonstrated feasibility for a production form configurator tool.

Education

Vellore Institute of Technology: B. Tech in Computer Science and Engineering (2023)
